

Nest Box Assembly Frame (Jig) & Hole Template

To make the Jig frame, use (4)-2 x 2 inch pieces of wood cut 23 inches long. Cut two pieces of plywood 10⁵/₈ x 10⁵/₈ inches and attach to the ends with screws. The hole template is used as a guide to cut out the entry hole and should be placed 2½ inches down from the top of the box. Make the hole template 11¾ inches wide to help center the hole. The entry hole needs to be 3 inches high x 4 inches wide (elliptical-oval).
