

Speaking HOPE to the World

A Digital Content Distribution Platform: MediaNexus

MediaNexus is a collection of tools designed and developed for media ministries. Store your content and/or metadata in MediaNexus Core, and distribute your content to your users on simple but feature-filled MediaNexus Apps for Android and iOS, and on your WordPress website.

MediaNexus Core:

Our digital asset management system stores your content and metadata, making your media resources available to your users via apps and plugins. If your media files are already stored elsewhere, add the direct URL and use MediaNexus to extend its function through increased metadata. Admin and user accounts provide protected access to your data.

MediaNexus Apps & Plugins:

Standard Apps (Android & iOS)

Our most full-featured apps for Android and iOS devices can be distributed through the Google Play Store and Apple App Store.

Live Example Apps:

Speak Hope App (multiple partners, many languages): [Android](#) | [iOS](#)

Discipleship Essentials (one partner/program, multi-level content structure, many languages): [Android](#) | [iOS](#)

Discipleship Applied (one partner/program, simpler content structure, one language): [Android](#) | [iOS](#)

Offline Apps (Android-only)

Our offline apps provide a beautiful interface for content you're distributing by SD or USB where internet access is limited or expensive.

- Distribute your content via microSD card with the same easy-to-use interface as our Standard apps.
- No data is transferred over the internet, so features that require internet access are not included.

Creative Access Apps (Android-only)

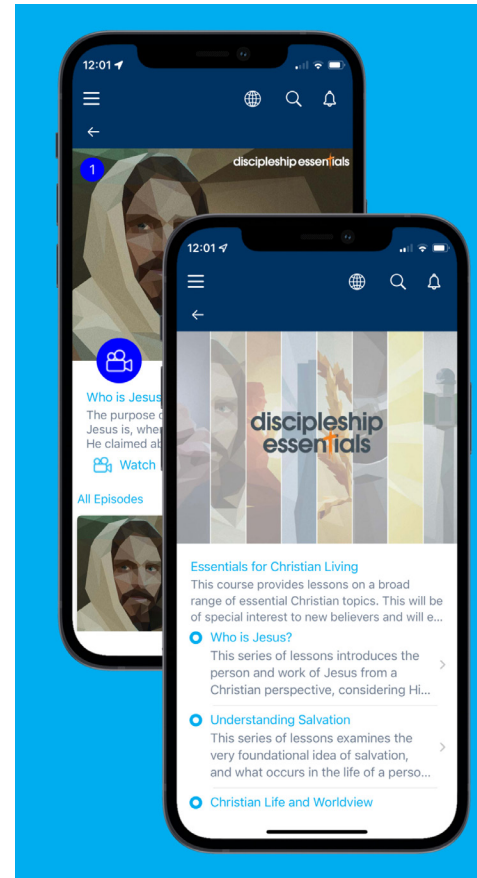

Adds encryption features to the Offline App, and hides content behind a functional decoy app and PIN. (Contact us for more details.)

WordPress Plugins (Works with your new or existing WordPress site)

- Add your content to your website with a simple WordPress app. No need to upload your content to your website separately!

Features include:

- Customizable app names, icons, splash screens and app colours
- Fully translatable interface and app store listings to better reach and engage your audience
- Choice of various content structures to fit your needs
- Use all common audio, video and text file types
- Transcoding of high-quality audio and video files to mobile-friendly formats
- Ability for users to search your content by topic or keyword
- Enhance already-online content with enhanced metadata
- User accounts to provide additional features such as viewing history, for users to pick up where they left off
- Push notifications to promote new content or encourage feedback from your users
- Ability to set download, stream-only, and regional permissions for your content
- Apps can be hosted in your ministry's Apple and Google Developer accounts (recommended to maintain tight branding for your organization) or we can host the apps for you in our TWR Canada-branded accounts.

All components of MediaNexus are developed using open-source software. MediaNexus Core and your information are hosted on the Amazon AWS Cloud on fully redundant servers with daily backups. For more information, please contact Jason Brown at TWR Canada (below) or by email: jbrown@twr.ca
